

INSTALLATION

A Wheel Bands Kit can be used on wheel sizes from 13" to 22".

Installation time varies based on wheel design, wheel size and experience level of the person doing the work. A first time do-it-yourself installation takes 40 minutes to an hour for a set of four wheels. A person who has installed Wheel Bands on several cars can do an installation on a set of four wheels in 20 minutes or less.

Will Wheel Bands fit on my rims?

The unique formed in radius design used in manufacturing Wheel Bands means that Wheel Bands are a universal fit on wheels ranging from 13" to 22".

HOWEVER, PLEASE NOTE: The high bond adhesive tape used to attach Wheel Bands to rims requires that there should be at least a 1/4" (6 mm) smooth, flat surface all the way around the wheel to mount the product properly to the wheel. Wheel Bands should not be installed If your wheel design does not have an adequate smooth, flat surface required for proper mounting.
