HPS

How to Determine Coupler Size

1. TOOLS NEEDED
Caliper or a ruler and painter's tape.

2. DETERMINE WHERE TO MEASURE
If there is a bead or raised ring at the end of the tube, do not use it to determine your measurement. Be sure to measure before or after the raised portion.

3. MEASURE (in inches)
Measure the outside diameter of the tube. If you do not have a caliper, wrap a piece of painter's tape around the nipple. Mark where the tape intersects and measure that length using a ruler. Then divide that number by pi (3.14) to determine the outside diameter.

4. SIZE
Use the outside diameter to determine the inside diameter of the coupler size you'll need.
